

Clinical Report:

Mr. Luís José Nobre is followed at the Medical Oncology Service of the Hospital of Luz de Lisboa under process number 102173745, for diagnosis ICD-0-3 34.9, in stage IV.

In the course of the diagnostic procedure, and in accordance with the recommendations of the European Society of Medical Oncology (ESMO) for guidance on the medical treatment of the disease, he performed EGFR mutations, KRAS; the rearrangements of the ALK and ROS1 genes and the expression of the PDL-1 ligand. These recommendations are also part of the specific pathology treatment protocols approved and used at the Hospital da Luz de Lisboa.

Best Regards

Luís Nobre

Diagnoses : Malignant growth Colon ascendens (C18 2) pT 4b (m), pN 2a (4/ 38), pM 1 (non regional lymph nodes 1 / 1, L 1, V 0, Pn 1, G 2, Ro UICC IV V.a

Secondary growth : intraabdominal lymph nodes (C 7/ 2)

V.a. pulmonary metastases

Anemia (D64 8), gastritis

Secondary malignant growth of other unspecified digestive organs (C 78 8)

Since March 2016 I realized more and more physical weakness. I could walk less and less. Path slopes became more and more difficult for me. Furthermore my appetite was decreasing. I ate less and less. Also I had a resistance towards food. Also against towards food that in former days I had liked. In July 2017 I had a complete break down. Within a few minutes I became so weak that I could not sit. I was brought to a clinic by an ambulance. Two and a half month I was in hospital and had serious operation. They took away one third of my colon and two malignant tumors (another Carcinoma in my colon and the metastases in my lungs stayed in my body.) Doctors did not let me go home because I daily lost big quantities of lymph fluid via two artificial channels in my abdomen. All the time the daily fluid lost did not decrease. My body weight was now 59 kg (two month ago 98 kg) Then I got a package with 4 ampoules Powerlight CA and had to take 1 ampoule per week orally. After the first intake every day the volume of fluid lost became smaller. After the second ampoule I could go home. I recover more and more. Pain in my stomach region I only feel after stretching. The water seepage stopped complete. My weight now is 79 kg. Hunger and appetite I have again. I can do everything and I am working in my job again. I feel well. Up to now – 3 month after leaving the hospital, I had no more surgery, no radiation and no chemotherapy. I was now examined by an oncologist- the complete abdominal area is free and there is no tumour anymore.
