

Dear Mr. Dr. Klose,

I will refer you today about the course of my illness and about my actual physical condition.

In summer 2010 a tumor in my brain (rightsided temporal an Astrozytom WHOII) has been diagnosed. First treatment was conservative with Cortison and antiepileptic medicaments.

In August 2010 the tumor could be mostly removed operativly.

In December 2013 a recidive tumor has been diagnosed. This recidive tumor shold also be operated.

An other therapy like chemotherapy or radiation was not indicated from the doctors. But I was not willing to repeat such an operative treatment.

From 10.12.2013 until 14.01.2014 have taken Powerlight CA and Powerlight NR. In the year 2014

I made 2 MRT-explorations, and they could`nt show a recidiv tumor. Since the treatment with these Powerlight-medicaments I had never more neurillogical falling outs or complains.

Thanks to your Powerlight- medicaments I could prevent a dangerous operation and the perpetual medication with antiepileptic medicaments. My physical condition, my well-being and my complete quality of life has been distinctly ameliorated.

Sincerely

Gabriele Zum Vontobel
